ELECTRICAL POTENTIAL PROBLEM – SIMULATION WITH MATLAB

SOURCE CODE

```
function varargout = EPSimulation(varargin)
% EPSIMULATION MATLAB code for EPSimulation.fig
%      EPSIMULATION, by itself, creates a new EPSIMULATION or raises the existing
%      singleton*.
%
%      H = EPSIMULATION returns the handle to a new EPSIMULATION or the handle to
%      the existing singleton*.
%
%      EPSIMULATION('CALLBACK',hObject,eventData,handles,...) calls the local
%      function named CALLBACK in EPSIMULATION.M with the given input arguments.
%
%      EPSIMULATION('Property','Value',...) creates a new EPSIMULATION or raises the
%      existing singleton*.  Starting from the left, property value pairs are
%      applied to the GUI before EPSimulation_OpeningFcn gets called.  An
%      unrecognized property name or invalid value makes property application
%      stop.  All inputs are passed to EPSimulation_OpeningFcn via varargin.
%
%      *See GUI Options on GUIDE's Tools menu.  Choose "GUI allows only one
%      instance to run (singleton)".

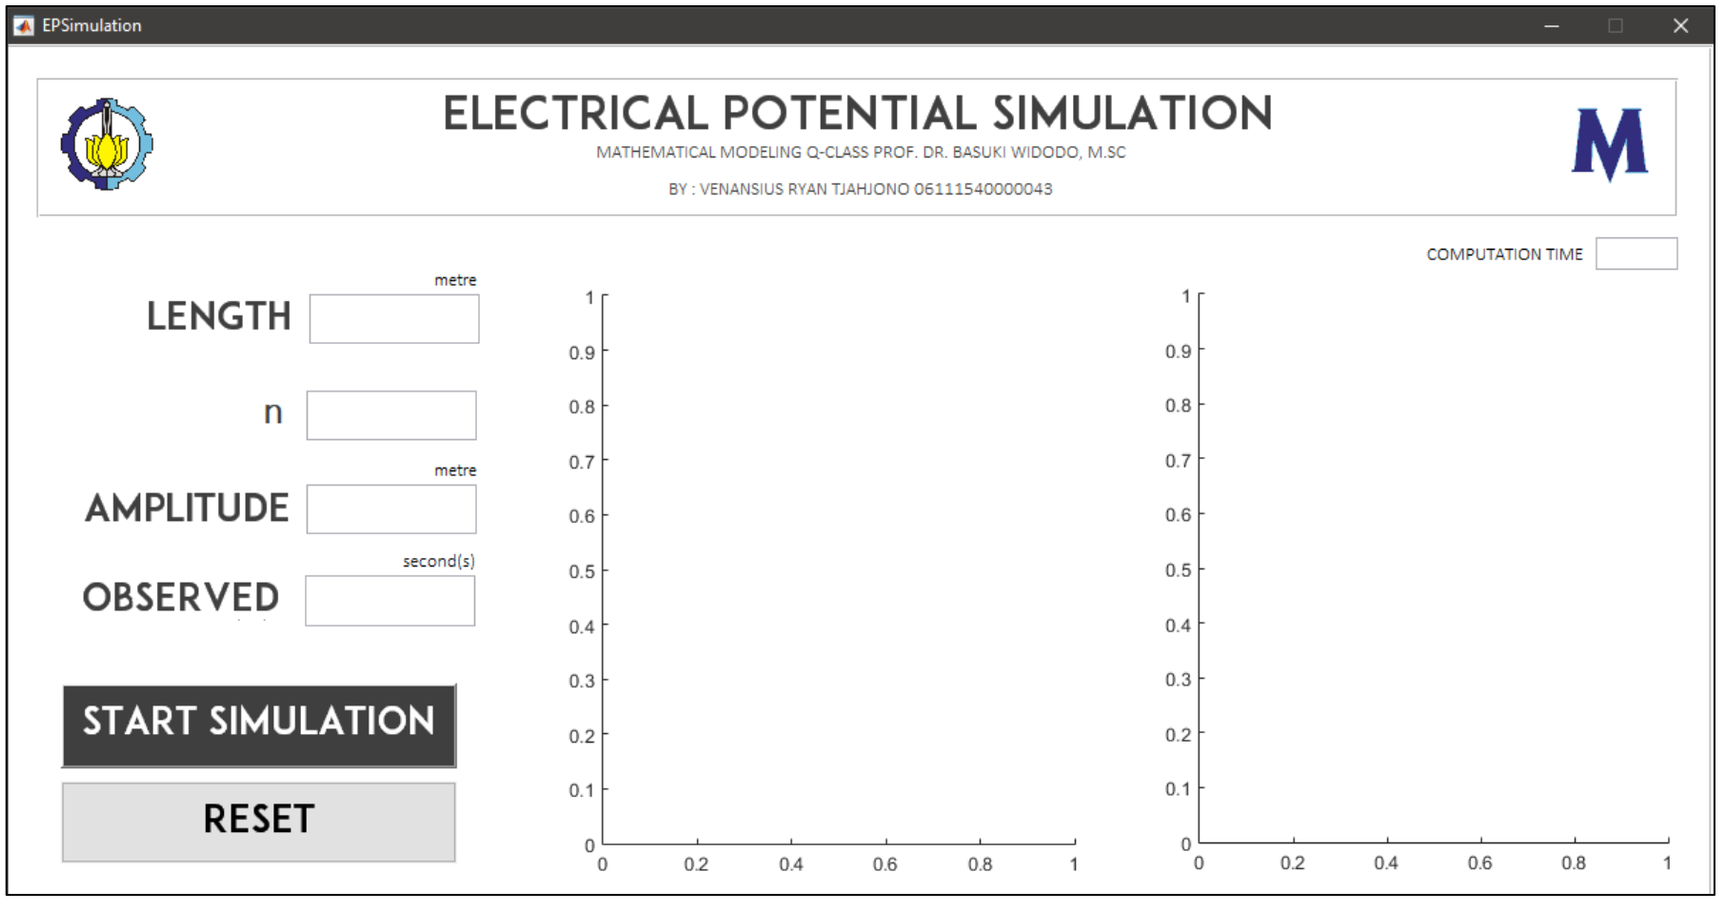
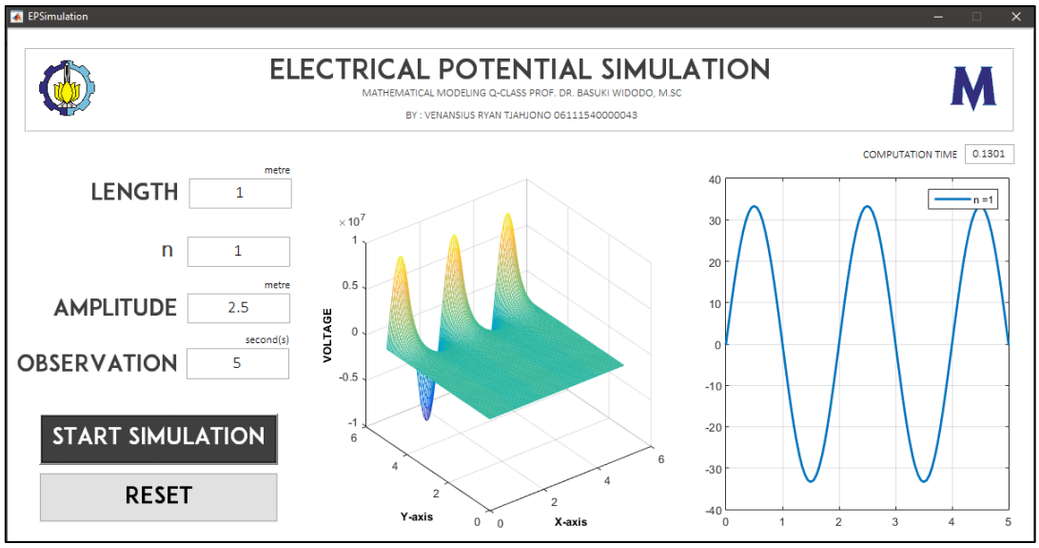
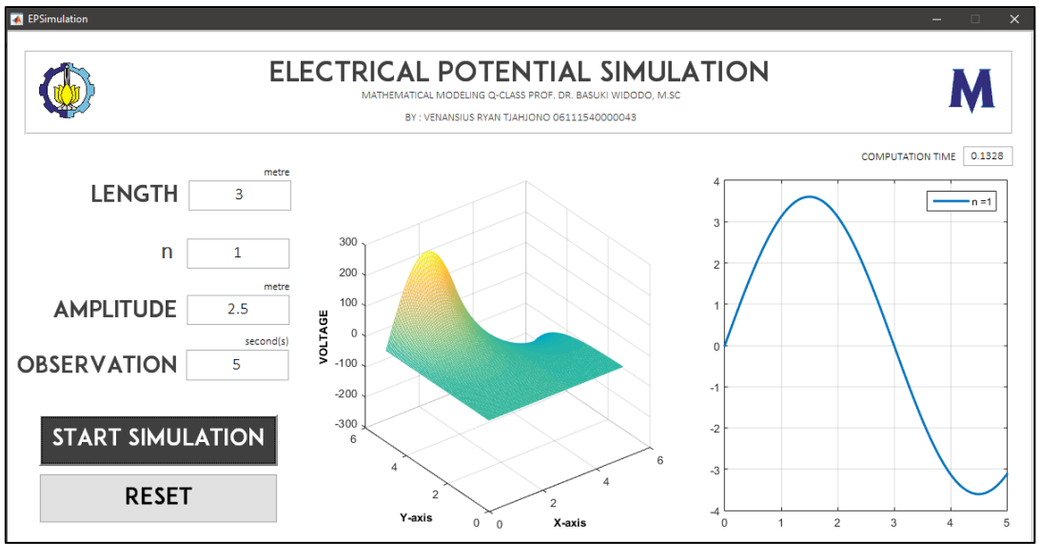
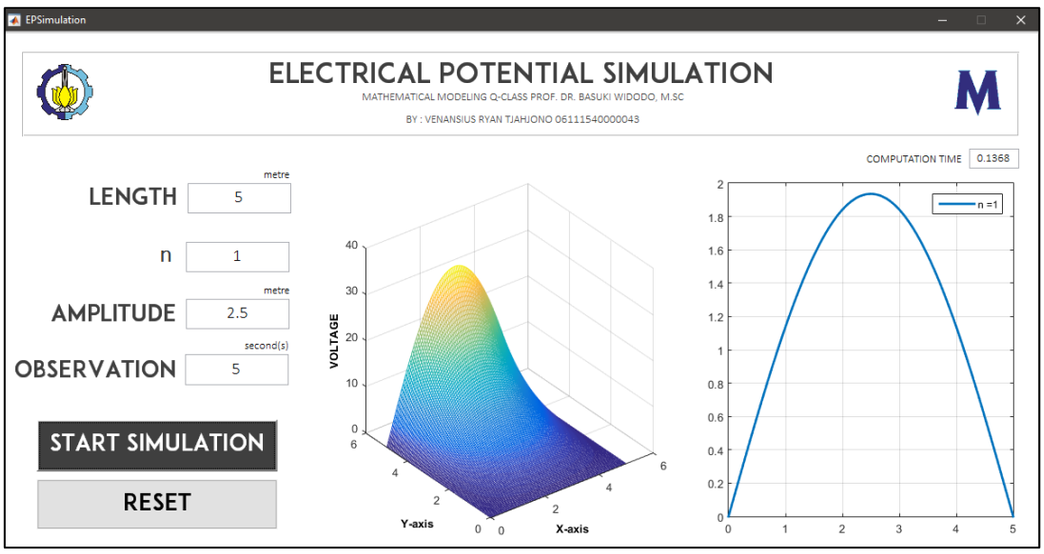


GRAPHICAL USER INTERFACE

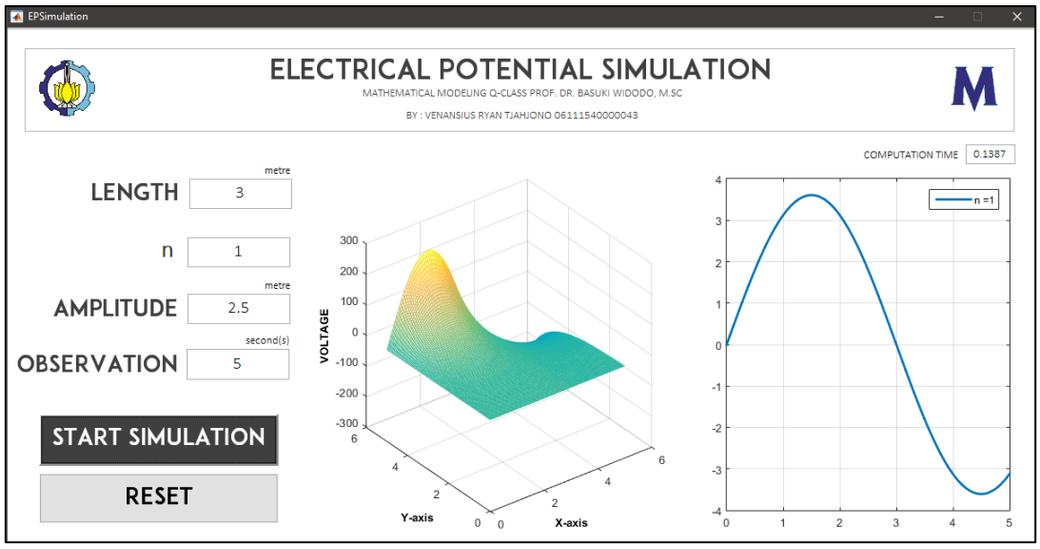
Simulation result with various length, $n = 1, A = 2.5$, and observed time 5 seconds

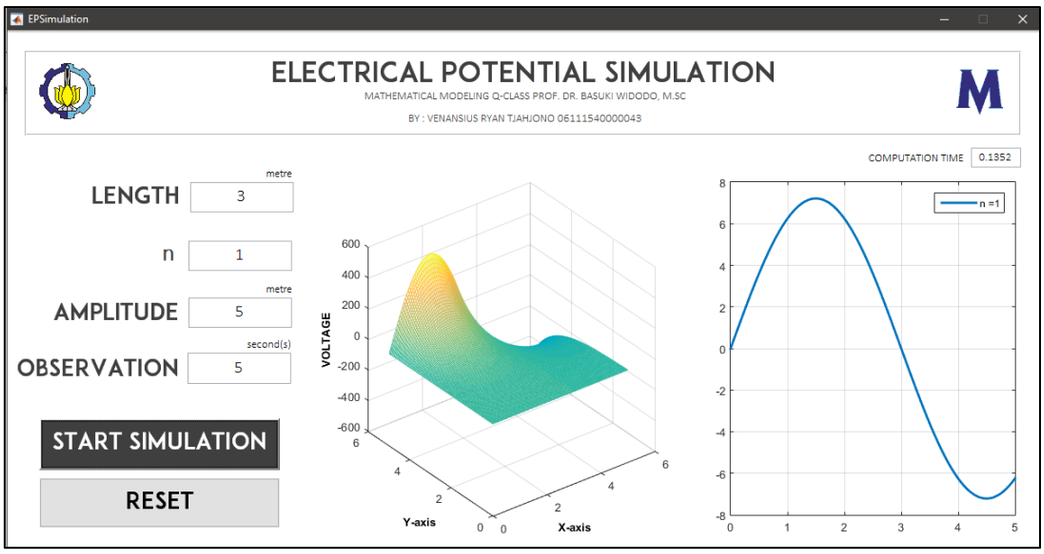


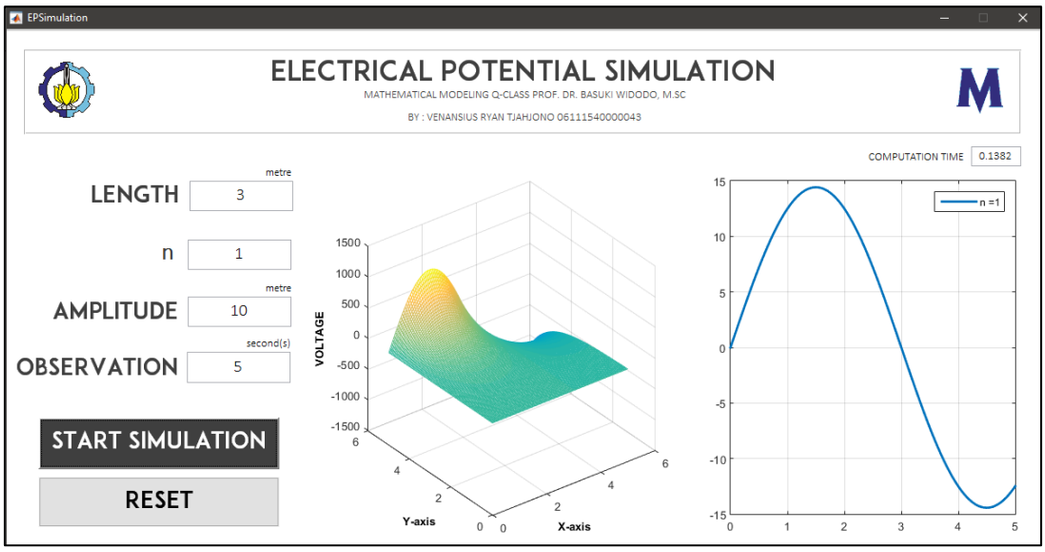




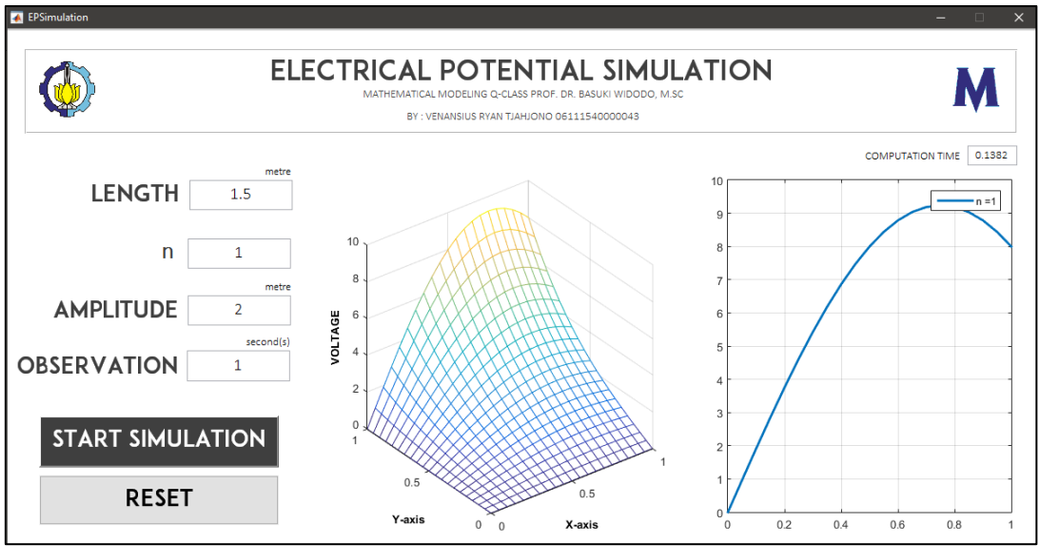
Simulation result with various amplitude, $L = 3, n = 1$, and observed time 5 seconds

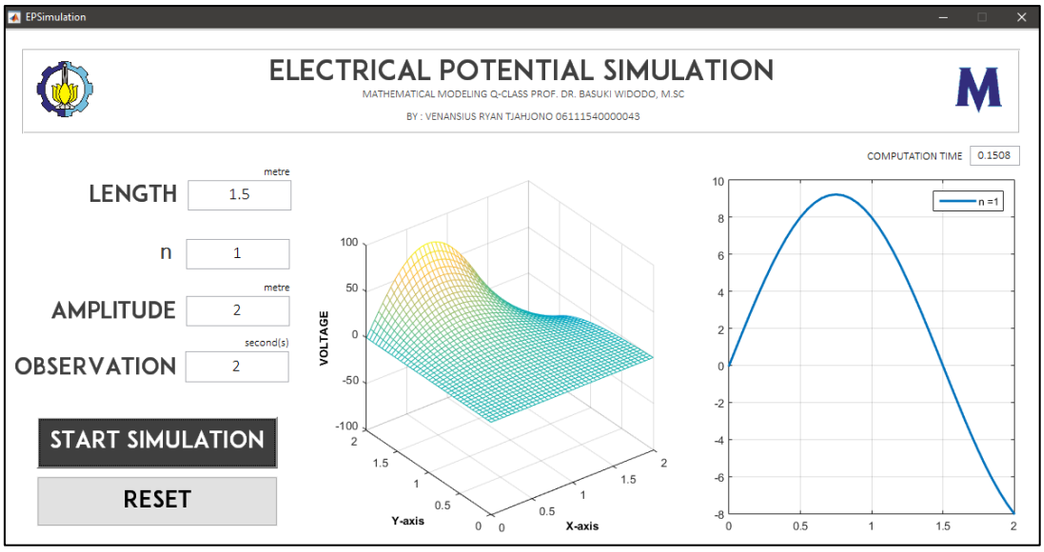


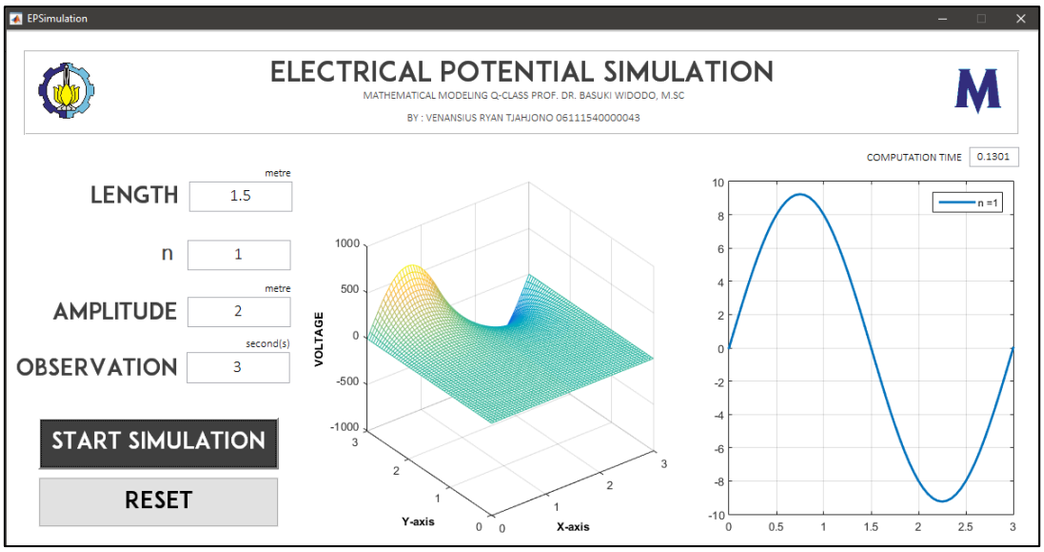




Simulation result with various observation time, $L = 1.5, n = 1$, and $A = 2$







CONCLUSION

With main model of electrical potential problem,

$$\frac{\partial^2 V}{\partial x^2} + \frac{\partial^2 V}{\partial y^2} = 0$$

With boundary & initial condition,

$$V(0, y) = V(L, y) = 0$$
$$V(x, 0) = 0$$
$$V(x, L) = A \sin\left(\frac{\pi x}{L}\right)$$

Afterwards, regarding to analytic solution, this simulation is made with results:

1. If L getting larger, the frequency of the voltage is slower.
2. Mostly, amplitude value does not affect the frequency, but affect directly to the value of voltage produced.
3. Observation time can make the simulation more palpable. The picture in page 9 illustrates how the electrical potential moves along XY-grid coordinates.

SPREADING DYNAMIC OF A CONTAGIOUS DISEASE IN HETEROGENIC POPULATION OF LIVING BEINGS WITH MULTI GROUP MODEL APPROACH – SIMULATION WITH MATLAB
